

Mustang ancient DNA Symposium

An interdisciplinary symposium at the crossroads of microbiology, paleogenetics, archeology, and bioinformatics.

This event brings together leading experts in archaeology, microbiology, and genetics to unveil the hidden stories of ancient Himalayas, with a focus on the Mustang region of Nepal, and antimicrobial resistance.

Discover lost histories of human migrations, early brewing of chaang barley wine, and about the spread of malaria through trade networks.

Join us for an enlightening experience that bridges the ancient and the modern, revealing the continuous thread of human and microbial adaptation, cultures, and innovation.
